RELEVANT EXPERIENCE

Taiv

SOFTWARE DEVELOPER | Full-Time — December 2025 - Present

SOFTWARE DEVELOPER | Part-Time — September – December 2025

SOFTWARE DEVELOPER CO-OP | Work Term 3 — May – August 2025

- Led frontend development for a new ad reporting dashboard processing billions of impressions for enterprise customers, taking the product from inception through a successful production launch.
- Designed and established frontend architecture, introducing TanStack Router, TanStack Query, Unleash feature flags, Storybook and feature-based folder structure to reduce friction and improve scalability.
- Championed frontend standards by implementing Vitest, Playwright and defining company-wide testing standards, including the first full Docker Compose Playwright environment for end-to-end testing.
- Led the migration from Create React App to Vite, coordinating multiple Node.js and dependency upgrades while reducing compile time from several minutes to less than 10 seconds.
- Standardized release management and development workflows by introducing Changesets, Biome, custom linting workflow and pnpm workspaces, significantly reducing pull request turnaround time.

LEAD DEVELOPER, OWNER, AND MANAGER — June 2019 – April 2026

Renatus Network Minecraft Game Server

- Led and directed over 30 staff members across all teams including development and management.
- Optimized all corners of the dedicated machine's systems to achieve over 500 days of stable uptime.
- Spearheaded growth, resulting in a 1,300% increase in community size and over 2,000,000 unique users.

SOFTWARE DEVELOPER CO-OP | Work Term 2 — September – December 2024

Priceline

- Developed a dynamic White Label partners table for dozens of internal users to access partner data faster.
- Created multiple features and components such as email resend, print itinerary, trip summary and more for the new trip lookup platform to drastically improve user experience across all hotel, car and flight platforms.

SOFTWARE DEVELOPER CO-OP | Work Term 1 — January – April 2024

Varian Medical Systems Inc.

- Researched and evaluated UI testing best practices to establish higher quality testing for developers.
- Unified toast messages for multiple actions to give a flawless experience for physicians and nurses.
- Enhanced team productivity by engaging in agile practices through code reviews and pull requests.

PROJECTS

MOMENTUM | Java, MySQL, and GitHub | Minecraft Server Extension — June 2021 – April 2026

- Achieved advanced statistic tracking and dynamic leaderboards for over 13 key components.
- Used by over 250,000 players, improving performance by over 700% through data processing and sampling.

BUDGET MANAGER | Java, Android Studio, SQLite, and GitHub | Hackathon 2023 Project — February 2023

- Ensured the backend's functionality and stability which resulted in a smooth and instant user experience.
- Optimized to use a MySQL database with zero performance loss and appropriate scaling.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python, C/C++, SQL, Bash and HTML/CSS.
Frameworks & Libraries: React, TanStack Router, TanStack Query, Redux, Tailwind and Storybook.
Testing & Tools: Vitest, Playwright, Cypress, Jest, Vite, pnpm/npm, Biome, CircleCI/GitHub Actions and Docker.

EDUCATION

Bachelor of Science, Computer Science Major (Co-op) — December 2025

University of Manitoba, GPA: 3.85/4.50, with distinction.
